

Review of the supervisor for the final qualifying work
**Sharipova A.Sh. "Serological resistance after treatment of acquired syphilis:
predisposing factors"**

The final qualifying work on the topic "Serological resistance after treatment of acquired syphilis: predisposing factors" is devoted to the urgent problem of modern syphilidology - the study of the problem of the emergence, diagnosis and treatment of serological resistance after treatment of acquired syphilis. In the course of a retrospective analysis of case histories, individual patient records were analyzed, as a result of which the characteristics of patients by sex and age were formed, the structure of concomitant pathology among patients with this diagnosis was assessed, and the therapy received by these patients was studied. In the course of a retrospective study, Sharipova A.Sh. 50 case histories of patients diagnosed with SR after treatment for acquired syphilis were selected and analyzed.

The thesis is written in compliance with the requirements, consists of logically related chapters: introduction, literature review, results of own research, conclusion, conclusions. The list of used literature contains domestic and foreign publications and teaching aids, as well as regulatory legal acts. In the course of the work, the student demonstrated such skills as analysis and application of modern scientific literature, competent presentation and analysis of the results obtained during the research.

Final qualifying work on the topic "Serological resistance after treatment of acquired syphilis: predisposing factors" Sharipova A.Sh. can be submitted for protection.
